

Ceramic Honeycomb

for Laser Processes

Any trouble scratching on your work?

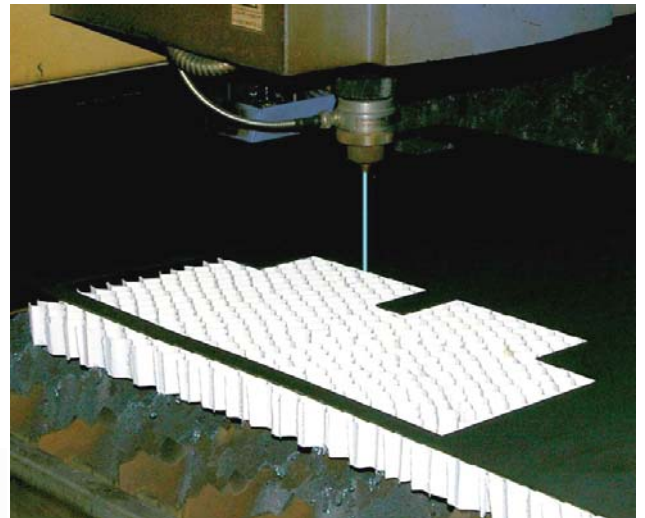

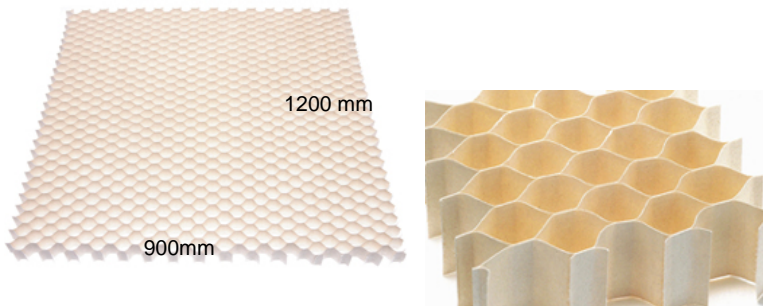

The material of ceramic honeycomb is nonflammable, so it maintains soft touch and never harms your product. Ceramic honeycomb is the best one for “scratch free” work!

Any worry of precision work for shin plates?

As the name indicates, this has honeycomb structure which has uniform surface, so ultra precision machining is possible. Also it works well for heat sensitive materials due to low thermal conductivity. Ceramic honeycomb, therefore, is the best for precisionwork for shin plates.

- Just put ceramic honeycomb on frog table.
- Ceramic honeycomb is made by nonflammable ceramic paper, so it is light weighted and easy to handle.
- Cut whatever the shape and size you like by a cutter easily.
- There is no worry for combustion due to nonflammable materials used.

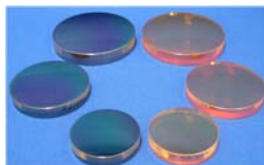

Please make sure to try before using for laser processes to see the usage conditions.
Ceramic honeycomb can potentially make surprising change due to long term laser usage, so please use as disposables.

Best for precision work for shin plates.

Type	Thickness	Weight	<u>Price per sheet</u>	<u>Price per box</u>
GM15T-20	20mm	0.63kg	9,600 yen	36,000 yen (6 sheets)
GM15T-30	30mm	0.94kg	13,000 yen	36,000 yen (4 sheets)
GM15T-40	40mm	1.25kg	17,000 yen	36,000 yen (3 sheets)

Size 900x1200mm
